

E-Anganwadi

Overview:

Anganwadi is a government-sponsored child and mother care center in India, primarily aimed at providing healthcare, nutrition, and early childhood education services. The main objective of the E-Anganwadi project is designed to digitize and modernize Anganwadi centers, making them more efficient and effective in delivering services to children. The E-Anganwadi is a web application that developed using the python.

This project has mainly 3 modules Admin, Staff and Parent.

The main duty of the admin is control or managing the system. There is a section to admin login, the admin login using their username and password. After the admin login, the admin can add and manage Anganwadi staff, scheduling the working time of the Anganwadi, assigning staff to each Anganwadi. Another duty of the admin is scheduling the food items for children. The admin also manage the syllabus of the children and view complaints of parents.

The another module is Staff. Each staff have particular username and password for login. After login, the staff can view their profile, their Anganwadi details and working time etc. The main duty of the staff is to manage student details and other Anganwadi related program details. The staff also have the responsibilities to give the food and study materials to children.

The next module is Parent. Each Parent should login with login credentials. If the student is a new admission, then the parent need to register first. Parent can view staffs updates and send leave request. The parent should view the food schedule and also send complaints about the staff to the Admin. It will provide more security and efficiency in this department.

FUNCTIONALITIES:

1. ADMIN
